EduPath AI

Adaptive Learning & Competency Analytics for Modern Education

By. Joseph Munyao

Problem

1: Educators struggle to track individual student mastery across practical Competency-Based Education (CBE) skills using traditional grading methods.

2: Existing portal tools only handle basic attendance, exam scores, and fee records—they lack personalized feedback and real-time skill analytics.

3: Teachers waste hours manually creating rubric-based quizzes, localized lesson plans, and practice assessments.

Solution

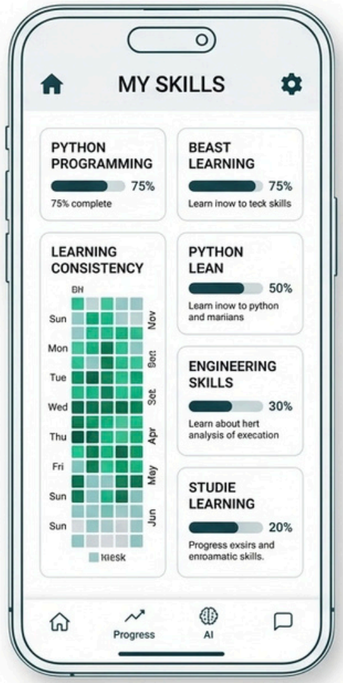

An intelligent, all-in-one platform for personalizing learning and tracking CBE skills—helping educators and students:

- track individual skill mastery in real time,
- generate localized study materials and rubric-based quizzes automatically,
- deliver 24/7 AI tutoring via web and mobile interfaces.

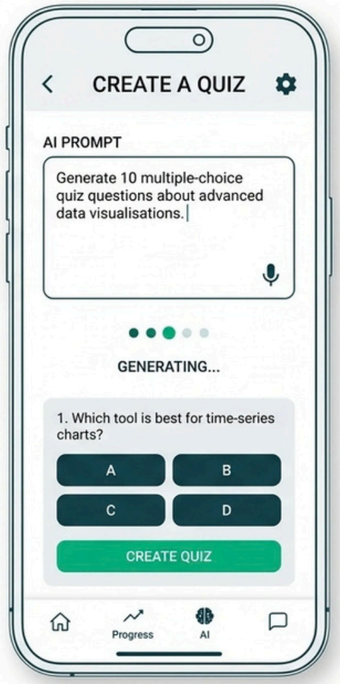

Smart Competency Intelligence for Modern Classrooms

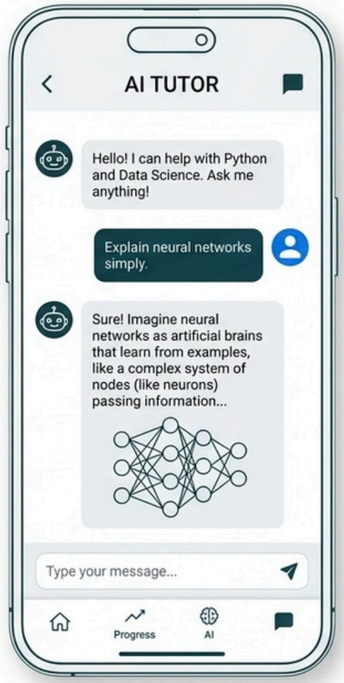

Product

Screen 1

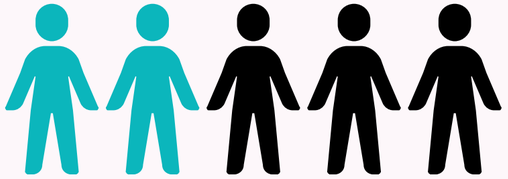

Screen 2

Screen 3

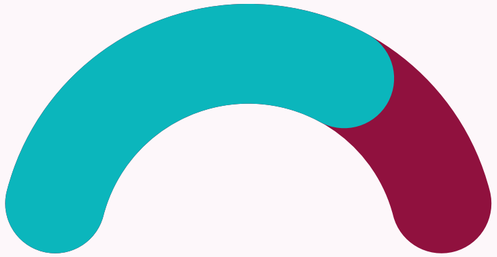

- Screen 1: Competency Dashboard — Visual skill heatmaps showing student mastery across specific subject topics.
- Screen 2: AI Assessment Generator — Instant rubric and quiz creation for teachers with a single prompt.
- Screen 3: EduBot Tutor — 24/7 AI assistant offering step-by-step guidance on complex practical assignments.

Target Market

3 out of 5

chools transitioning to CBE actively search for automated assessment tools.

68%

of educators who adopt digital portals require automated lesson-planning features.

1.5 million

primary and secondary students requiring adaptive, competency-focused tracking.

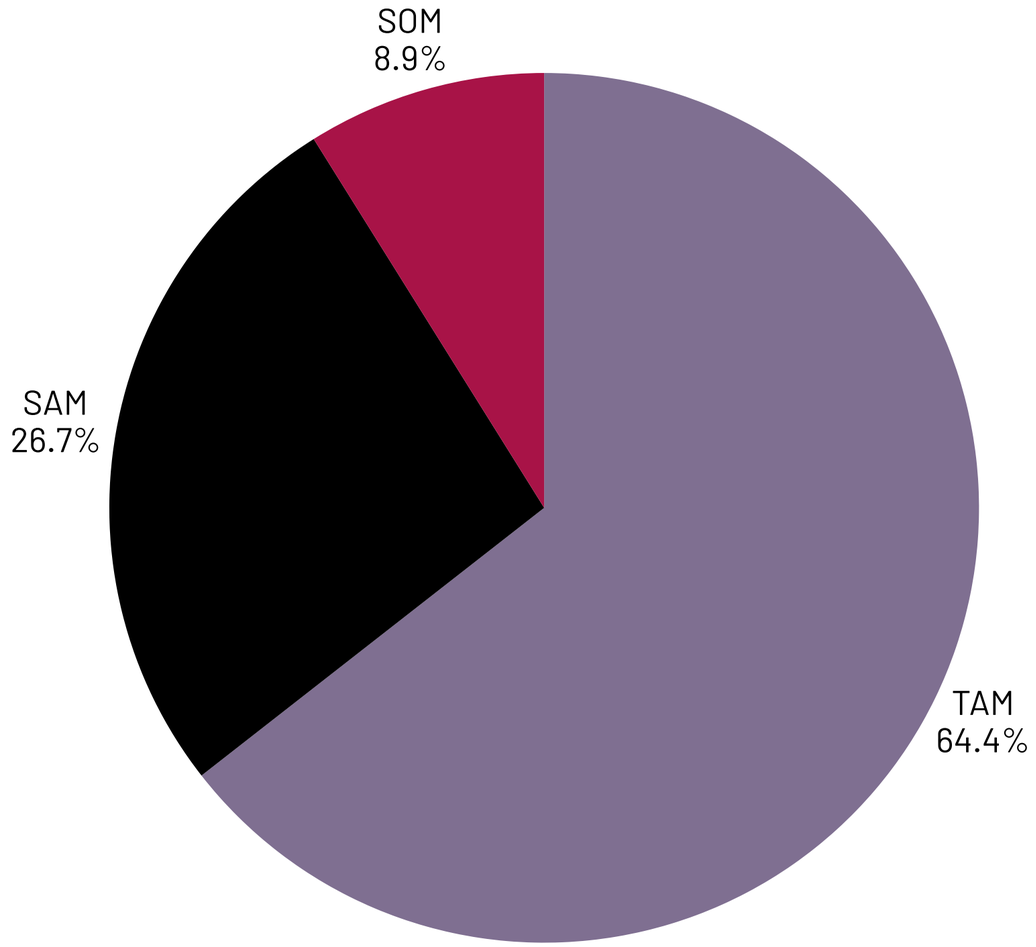

Market Size

Metrics:

- Total Addressable Market (TAM): 5.8 Million Students

- Serviceable Addressable Market (SAM): 2.4 Million Students

- Serviceable Obtainable Market (SOM): 850,000 Students

Competitors

1: Traditional School Information Systems (SIS) – Legacy portals with basic gradebook logs; lack skill heatmaps or AI features.

2: Global LMS Platforms (e.g., Canvas, Google Classroom) – Great for content delivery, but lack localized CBE frameworks and automated rubric generation.

Competitive Advantage

CBE-Native Design: Built specifically around practical competency outcomes rather than static letter grades.

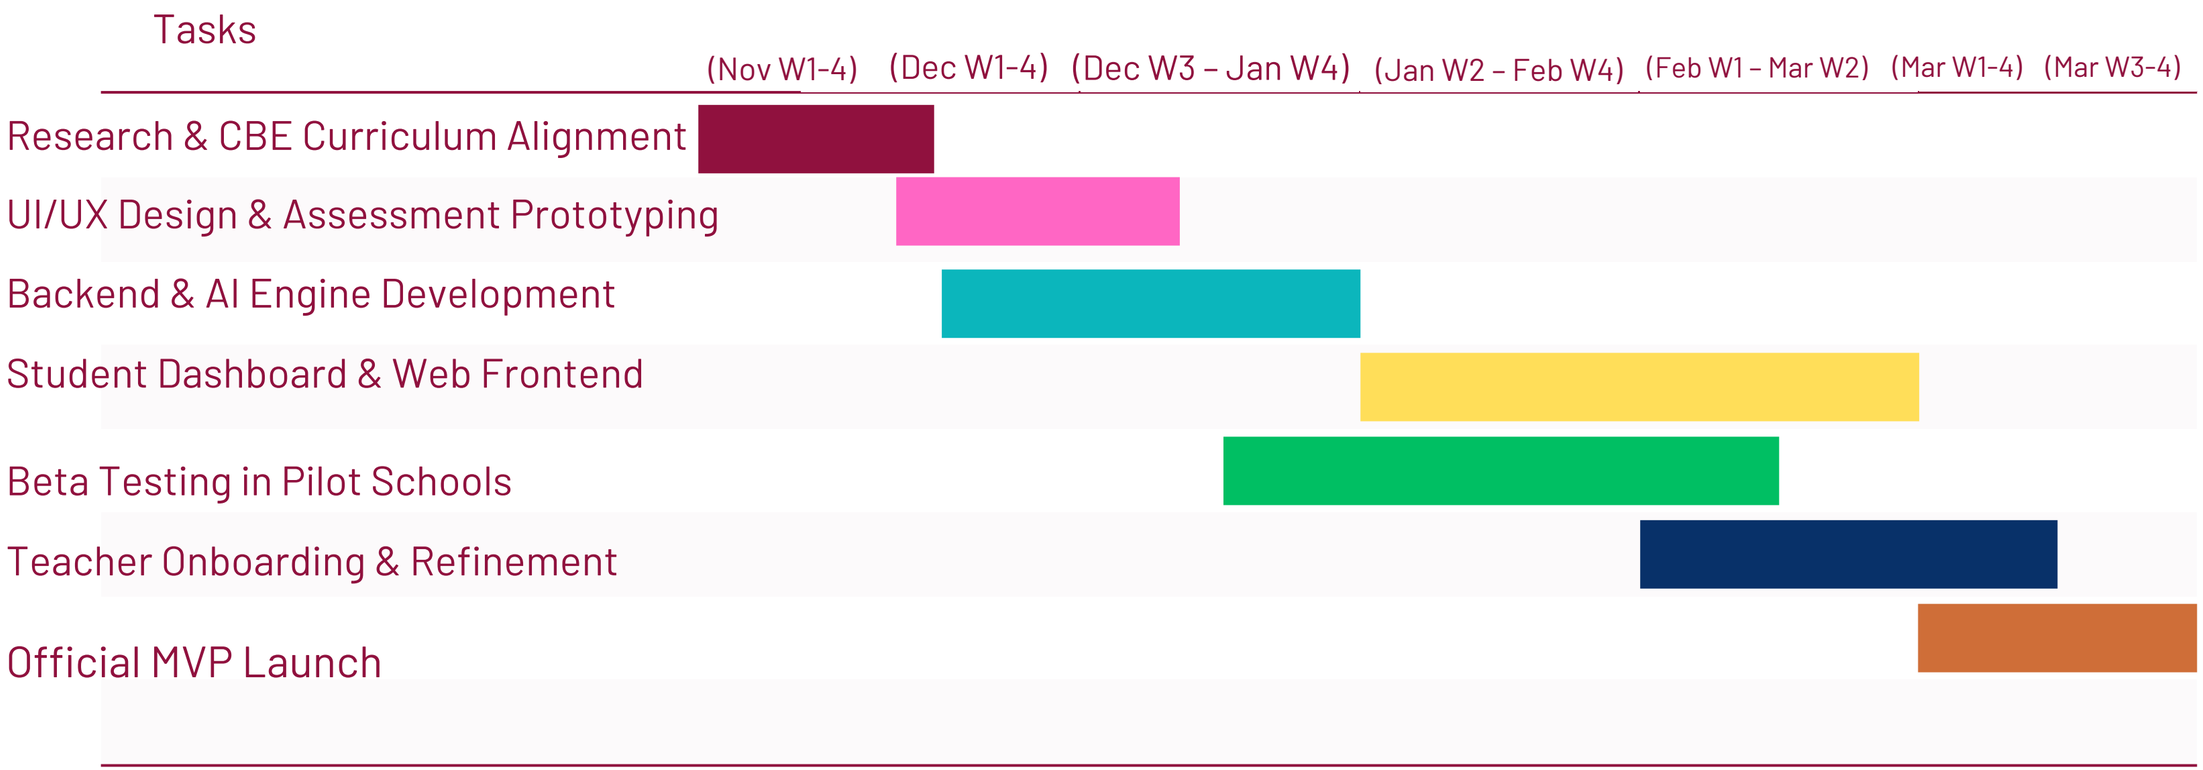

AI-Driven Insights: Automates rubric evaluation and generates adaptive quizzes in seconds.

Low-Bandwidth Friendly: Works seamlessly across desktop web, lightweight mobile, and messaging platforms.

Affordable SaaS Model: Simple per-student monthly pricing tailored for both public and private institutions.

Project Traction

Business Model

Model: Subscription-Based SaaS Model (Free 14-Day School Trial)

- Standard Plan: $2/student/month (Basic analytics & AI quiz generator)
- Premium Plan: $4/student/month (Full skill heatmaps, EduBot 24/7 tutor, API integrations)

Profit Margin (Per Student):

- Standard: Revenue $2.00 | Cost $0.60 | Gross Profit $1.40 (70% Margin)
- Premium: Revenue $4.00 | Cost $1.10 | Gross Profit $2.90 (72.5% Margin)
- Revenue Projection:
- 5,000 Standard Users ($2/mo): $10,000 Monthly ($120,000 Yearly)
- 2,500 Premium Users ($4/mo): $10,000 Monthly ($120,000 Yearly)
- Total Target: $20,000 Monthly / $240,000 Yearly

Go To Market

- **Direct Institutional Sales:** Targeted outreach and pilot demos for private primary and secondary school administrators.
- **Teacher Ambassador Program:** Free starter tier for teachers to create AI quizzes, driving bottom-up adoption in schools.
- **Ministry & Curriculum Partnerships:** Pilot partnerships with regional education boards transitioning to Competency-Based Education (CBE).
- **EdTech Workshops & Webinars:** Live training sessions showing educators how to automate rubric grading and skill tracking.

Social Impact

- **SDG 4 (Quality Education):** Drives effective learning outcomes through Competency-Based Education (CBE) and reduces teacher workload by automating grading and lesson planning.

- **SDG 10 (Reduced Inequalities):** Equalizes access to quality learning by providing personalized AI tutoring to students in under-resourced schools.

- **SDG 8 (Decent Work & Growth):** Equips students with practical, measurable skills to boost future employability and economic opportunities.

Our Ask

We are Seeking 2500 USD in Seed / Grant Funding to scale pilot **programs to 50 target schools.**

Use of Funds Breakdown:

- 40% Product Development: AI model fine-tuning and web/mobile UI optimization.
- 30% School Onboarding & Sales: In-person training workshops for school faculty.
- 20% Infrastructure & Hosting: Low-latency server infrastructure and API costs.
- 10% Operations & Compliance: Data protection and curriculum accreditation.
